Hey! Turn Around A Minute, Please!

Before you read this book, there's something we feel you should know.

Here's the story — we would like to be sure that our friends understand that this catalog is something more than a price list: that we have worked long and hard to prepare a little book which you can use as a Gardener's Guide.

Just what do we mean? Well, this. Many many hours are spent here at our Nurseries in the winter, when you probably picture us asleep with our feet on the desk, doing research to obtain information about the trees, shrubs and flowers we are going to offer you. In fact, we have found by actual comparison, there are very few nurseries in the whole country that offer catalogs which give the complete information we do, including maximum height, flowering seasons, color of flower and fruit, suggestions for best planting locations and facts about relative hardiness, etc.

We've tried to make this catalog helpful to you. We are always glad to have your suggestions as to how we can improve it — Won't you give us yours?

So please make sure YOU get OUR MONEY'S WORTH, by reading carefully, and noticing the little symbols which tell a big story.

So, here's our 1952 catalog, sent to you with every good wish for your well being and gardening success this year and every year.

Now sit back, relax, and enjoy yourself, — the lecture is over.

Heights given with caliper measurements are general average and are approximate only. Where no caliper is given, the height is the governing measurement.

After the regular bare-root digging season is passed, this material must be dug with a ball and, since considerable time, labor, and soil are involved, balling and burlapping will be charged. Prices quoted on request.

OVERSIZED TREES

Catalog space does not permit us to list the hundreds of large, oversized, beautiful trees in which we specialize. The saving of time in planting such trees is so marked that scarcely any home owner can afford to plant the usual small tree which would require many years to equal these in size.

If you are interested in oversized trees, ask us for a list of our large stock.

Ground Covering Plants

Just as their name implies, the following plants are suitable for covering the ground under trees and other places where grass won't grow. Although primarily foliage plants, some have blooms. Some have roots that spread and send up new top growth, some spread by sending out trailers that take root, and others merely grow more or less prostrate, spreading out as they enlarge to cover a greater area of ground each year.

Deciduous Shrubs

FOR FLOWERS, FOLIAGE, BERRIES

Any true lover of nature will find a world of joy and happiness watching the striking and fascinating changes in flowering shrubs throughout the season. They are a delight from the first mild spring day, when the buds begin to swell, until late in autumn, when the leaves are resplendent in their festive colors and brilliant berries.

We are only able here to acquaint the reader with a very small portion of this wealth of beauty. Generous planting of shrubs around the home will repay in beauty and pleasure many times over the small investment required.

SHRUBS B&B (Balled and Burlapped)

Unless otherwise marked "B&B" (Balled and Burlapped), shrubs are dug bare rooted when dormant. Should balling and burlapping be desired on shrubs not marked "B&B," an extra charge will be made at the following rates.

After the regular bare-root digging season is passed, this material must be dug with a ball, and since considerable time, labor and soil are involved, balling and burlapping will be charged at these rates.

Not only do these trees produce large, delicious full-flavored Chestnuts at an early age, but their beautiful rounded, spreading branches rapidly develop into a lovely tree to grace any home lawn.

Planting Directions

BALLED and BURLAPPED MATERIAL:

Dig holes 18" larger than diameter of ball and 6" deeper than the depth of the ball. Save top-soil, discard sub-soil. Mix, at least 3 times, prescribed amounts of assembled fertilizer with saved top-soil or new loam for proper blending. Spade enough of soil-fertilizer mixture into bottom of hole to insure ball being set at original plant depth as indicated by different bark color. Fill in hole around ball half full. Tamp well. Cut strings and burlap flush with filled-in soil. Fill hole with water and allow to soak in. Complete filling hole with mixture, leaving top saucer-shaped to catch moisture. Water weekly.

BARE ROOT MATERIAL:

The diameter of the hole should be dug at least 2 feet larger than root spread, and 12" deeper than depth of roots. Save top-soil, discard sub-soil. Spade enough of soil-fertilizer mixture into bottom of hole to insure plant being set at original depth as indicated by different bark color. Trim broken root ends. Set plant in hole and fill hole half full of mixture, shaking plant up and down several times to work soil around roots. Tamp well. Fill hole with water. After water has soaked in, complete filling in, leaving surface saucer-shaped to catch water. Stake all trees over 2" caliper, using rubber hose through which run wires to avoid chafing. Water weekly.
